

The Institute of Biochemistry and Biophysics of the Polish Academy of Sciences offers cooperation opportunities for persons and institutions interested in conducting monitoring of the natural environment based on the infrastructure of the H. Arctowski Polish Antarctic Station.

We offer the possibility of installing measuring equipment in the field and providing continuous technical support, regular measurements or observations, collecting test samples and preliminary data processing. All these works will be carried out by professionally prepared employees of the H. Arctowski Polish Antarctic Station.

Two forms of cooperation are possible:

- Contract of mandate - full fee for monitoring - the only owner of the acquired data will be the ordering party.
- Cooperation agreement - the parties jointly cover monitoring costs - IBB PAS and the ordering party will be co-owners of the acquired data.

Detailed cost and conditions of cooperation will depend on the scope and type of measurements to be carried out and the degree of utilization of the infrastructure of the H. Arctowski Polish Antarctic Station. Preliminary valuation of services for the ordering parties will be prepared after receiving a request with a proposal for monitoring.
